

# Endpoint Security: Centralized Monitoring & Management

## Safeguard your Internet-Connected Devices against Cyberthreats

Endpoint security refers to the safeguard of Internet-connected devices against cyber threats, such as malware, DDoS attacks, data breaches. Managed endpoint monitoring is crucial for enterprises to detect, respond, mitigate potential risks with enhanced visibility and preventive measures.

## Comprehensive Endpoint Security Monitoring Solution

HGC offers a best-in-class portfolio of endpoint security monitoring solutions, covering data and network security, advanced threat prevention, forensics, endpoint detection and response (EDR), as well as remote access VPN solutions, to empower enterprises and employees with deep endpoint visibility across the extended enterprise and simplify endpoint security planning and management.

## Features

7/24 Monitoring of the availability and utilization of network devices

Proactive alert, immediate troubleshooting and service remediation handling

R.DOC service support

Customised escalation flow

Fault reporting services by emails and phone calls

Monthly performance & incident report

Service Delivery intelligence: Diagnosis, Analysis, Planning and Management

## Your Benefits

- ✓ Detect and remediate malware across endpoints quickly
- ✓ Avoid non-compliance and lawsuits
- ✓ Comprehensive centralized monitoring
- ✓ Extend your cybersecurity team's capacity
